

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	KINDRED HOSPITAL - SANTA ANA
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106301167
Report Period:	01/01/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	11/24/2025
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	www.kindredhospitals.com/locations/california/santa-ana

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

1591

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	1352	1591	85.0
Spanish Language	175	1591	11.0
Asian Pacific Islander Languages	suppressed	1591	suppressed
Middle Eastern Languages	suppressed	1591	suppressed
American Sign Language		1591	
Other Languages	suppressed	1591	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:
<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health

information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

NA

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

NA

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

NA

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity				
Housing Instability				
Transportation Problems				
Utility Difficulties				
Interpersonal Safety				

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

NA

Total number of respondents to HCAHPS Question 19

NA

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

NA

Total number of people surveyed on HCAHPS Question 19

NA

Response rate, or the percentage of people who responded to HCAHPS Question 19

NA

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual					
Something else

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

NA

Total number of respondents to HCAHPS Question 17

NA

Percentage of respondents who responded "yes" to HCAHPS Question 17

NA

Total number of people surveyed on HCAHPS Question 17

NA

Response rate, or the percentage of people who responded to HCAHPS Question 17

NA

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

50

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

225

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

222.2

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality	Expected Payor			Medicare	190.5	2.2
Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality	Race and/or Ethnicity			White	215.2	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Male	2.8	1.6
Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality	Sex Assigned at Birth			Male	216.4	1.1

Plan to address disparities identified in the data

Upon full compliance with all equity reporting and privacy requirements, four disparities were identified among the stratified measures for Kindred Hospital Santa Ana requiring targeted action: 1) elevated pneumonia mortality among privately insured patients, 2) higher pneumonia mortality among Asian patients, 3) increased all-cause 30-day readmissions among female patients, and 4) a smaller but meaningful pneumonia mortality gap between female patients (higher rate) and male patients (lower rate). First, for context, the readmission numbers shown in this report do not represent all hospital readmissions. Due to statewide data limits in 2024, ScionHealth was able to track only patients who were transferred out then returned to a ScionHealth facility—not patients who were readmitted to other hospitals. As a result, these values represent return-from-transfer rates, which are much lower than the typical 30-day potentially preventable LTCH readmission rates reported by CMS. Beginning in Q4 2025, the hospital will launch a comprehensive equity action plan to close these gaps, as follows: 1) Elevated pneumonia mortality among privately insured patients: To address the significantly higher pneumonia mortality rate among privately insured patients, the hospital will conduct detailed case reviews in Q4 2025 to evaluate diagnostic delays, authorization barriers, and escalation gaps. A multidisciplinary Pneumonia Equity Workgroup will map workflows and identify system vulnerabilities. In Q1 2026, standardized early-warning triggers, mandatory pneumonia huddles within four hours of admission, and strengthened case-management processes will be implemented to prevent care delays. Education and pathway reinforcement will

occur in Q2 2026, followed by continuous monitoring in Q3-Q4 2026. The goal is a 10% reduction in pneumonia mortality among privately insured patients within 12 months and sustained pneumonia bundle compliance above 95%. 2) Higher pneumonia mortality among Asian patients: The hospital will also address the higher pneumonia mortality rate among Asian patients. Beginning in Q4 2025, race-stratified root-cause analyses will assess language barriers, cultural communication patterns, and interpreter use. Partnerships with community organizations will support culturally informed improvements. In Q1 2026, interpreter documentation checkpoints will be added, and pneumonia education materials will be translated into Chinese, Vietnamese, Korean, and Tagalog. Q2 2026 will introduce culturally informed Interdisciplinary Care Rounds for high-risk pneumonia patients, supported by linguistically tailored education. Monitoring and workflow refinement will continue

through Q3-Q4 2026. Objectives include a 10% reduction in pneumonia mortality among Asian patients and a 25% increase in interpreter utilization by mid-2026. 3) Increased all-cause 30-day readmissions among female patients: To address higher 30-day readmissions among female patients, the hospital will begin in Q4 2025 with a review of top readmission drivers and social determinants that disproportionately affect women. In Q1 2026, improvements will include mandatory follow-up appointment scheduling before discharge, pharmacy-led medication reconciliation, and structured 48-hour follow-up calls. Q2 2026 will focus on tailored education and coordination with community resources for transportation, home health, and equipment needs, with ongoing monitoring in Q3-Q4 2026. The target is an 10% reduction in female readmissions within 12 months and a 95% completion rate for 48-hour follow-up calls. 4) Pneumonia mortality gap between female and male patients: Finally, to address the smaller pneumonia mortality gap between female and male patients, the hospital will review female pneumonia cases with ICU transfers or mortality in Q4 2025. In Q1 2026, staff education will emphasize atypical pneumonia presentations in women and reinforcement of sepsis and pneumonia alert workflows. Q2 2026 will include real-time adherence audits, followed by monitoring and stratification through Q3-Q4 2026. The goal is a 10% reduction in pneumonia mortality among female patients within 12 months. Through these coordinated, data-driven strategies beginning in Q4 2025, the hospital reaffirms its commitment to advancing health equity, reducing preventable disparities, and ensuring all patients receive the highest standard of care. Quarterly dashboards, interdisciplinary reviews, and QAPI oversight will support measurable, sustainable improvement.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Kindred Hospital-Santa Ana and its parent company, ScionHealth, have prioritized person-centered care as a critical area of focus to ensure that every patient receives care that is not only effective but also tailored to their individual needs, preferences, and values. We

are committed to providing care that is patient-centered through initiatives focused on patient safety, communication, and respect for individual preferences guided by the voice of our patients and who they identify as family. Our team of dedicated healthcare professionals keep patients and families informed and actively engaged in care through clear communication during bedside shift reports, leader rounding, and bedside interdisciplinary care team (ICT) rounds. We place strong emphasis on shared decision-making, ensuring patients are actively involved in decisions about their care. Our performance in this area includes consistent ICT rounding in which patients and families can actively participate, discuss and understand their goals of care with the whole interdisciplinary team. This practice provides patients and families with the opportunity to engage with the full care team, review their goals, including patient-driven goals, and ensure their preferences are integrated into their care plans. Upon admission, patients are asked about language preferences, and professional interpreters are available throughout their stay. We utilize a language service in which patients have access to translation services in more than 200 languages. This has improved communication with non-English-speaking patients and family members. This service is essential for overcoming language barriers and ensuring that every patient can fully participate in their care. Understanding and respecting the diverse cultural backgrounds of our patients is a key component of our person-

centered care. Our staff completed training on cultural competence and implicit bias, helping them provide care that respects and acknowledges patients' cultural, linguistic, and personal preferences. We also value patient feedback and have used it to help improve our delivery of care and enhance patient experience. Patient feedback is central to our ongoing improvement efforts, and we actively seek input from patients and families. To ensure the patient voice guides our work, we have implemented a Patient and Family Advisory Council (PFAC), which acts as a resource and provides valuable input to improve and enhance the healthcare experience from the perspective of the patient. This feedback informs our strategies to create a more compassionate, equitable, and responsive care environment. ScionHealth has implemented additional initiatives focused on enhancing person-centered care in its hospitals. For example, the ScionHealth Patient Experience Advisory Council, made up of a multidisciplinary group of employees, focuses on improving patient care experiences through the perspective and feedback of the frontline employee. Through discussion of patient feedback and employee-identified concerns, this committee serves to identify systemwide trends and opportunities for improvement. In addition, ScionHealth's National Quality Strategy trains leaders on the importance of service excellence toward patients and methods to achieve it. Topics of the training include connecting with patients, respectful communication, listening and empathy. Both

ð

clinical and non-clinical staff are expected to uphold ScionHealth's high standards for service excellence, regardless of their role or extent of their direct patient contact. We are committed to ensuring that our care delivery is always equitable, compassionate, and responsive to the diverse needs of the communities we serve. By focusing on cultural competence, and patient-centered communication, we are ensuring that all individuals, regardless of background or identity, receive the highest standard of care.

Patient safety

ScionHealth's National Quality Strategy serves as the framework for performance improvement within our facility and across our nationwide health system. The National Quality Strategy is built upon a foundation of high-reliability principles, including leadership commitment to data-driven and transparent improvement processes, a relentless pursuit of safety, and a focus on continuous learning across six domains of care quality: 1. Safe, 2. Patient-centered, 3. Effective, 4. Efficient, 5. Timely and 6. Equitable. ScionHealth has embarked on a journey to be a high reliability organization (HRO). HROs are organizations that operate in complex, high-hazard domains for extended periods without serious accidents or catastrophic failures. Characteristics of an HRO include: • Preoccupation with failure • Reluctance to simplify explanations • Sensitivity to operations • Commitment to resilience • Deference to expertise • Goal of Zero Preventable Harm An HRO is an organization with predictable and repeatable systems that support consistent operations while catching and correcting potentially catastrophic errors before they happen. Leaders in a HRO are committed to zero patient harm. Benefits of highly reliable organizations include reduced errors and adverse events, improved patient safety, enhanced quality and efficiency, increased resilience in the face of unexpected events, greater employee satisfaction and reduced burnout. Our high reliability journey is supported by a culture of safety focused on trust and transparency. In alignment with our organizational values • Value Every Voice, Show Courage, and Lean into New Ideas • we promote foundational behaviors that serve as a direct pathway to creating a culture of safety and high reliability. Executive Patient Safety Rounds, Bedside Shift Reports, Whiteboards, Handoff Communication, etc. and our approach to care set the foundation for delivering exceptionally safe and consistently high-quality care over time even in a complex and high-risk environment. Foundational Safety Behaviors are the way we safely care for patients and the way we lead our teams to support a

culture of safety in which every employee is empowered to speak up on behalf of our patients to meet their individualized needs and to provide care that is safe and reliable.

Addressing patient social drivers of health

Kindred Hospital- Santa Ana is committed to advancing the National Quality Strategy by addressing both Social Determinants of Health (SDOH) and Health-Related Social Needs (HRSNs). We recognize that equitable care requires not only clinical excellence but also attention to the social and environmental factors that shape health outcomes. While SDOH encompasses the broader context of health determinants, HRSN addresses the immediate needs that individuals face that can affect their health outcomes. Throughout each hospital stay, our interdisciplinary team of nurses and case managers assesses patients' immediate needs, using the standardized assessment tool, the AHC Health-Related Social Needs Screening Tool. Core questions include access to safe housing, nutritious food, reliable transportation, caregiver support, and secure living environments. Caregivers can better inform patients' treatment plans, improve outcomes, and work collaboratively to mitigate identified factors. The team identifies appropriate resources and makes referrals as appropriate to meet each patient's unique needs. Discharge follow-up calls help maintain continuity of support. Beyond the hospital, we partner with community-based organizations, social service agencies, and public health departments to coordinate services, reduce duplication, and improve navigation across the continuum of care. These collaborations not only address individual patient needs but also promote systemic changes that benefit the broader population. We believe that improving social conditions is essential to improving health outcomes, and we remain steadfast in our mission to enhance the health of our communities with compassion and excellence in all we do.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

ScionHealth is committed to delivering safe, evidence-based, and effective care for all patients, with a focus on eliminating preventable harm and ensuring equitable outcomes. Our National Quality Strategy drives practices through the development and consistent implementation of evidence-based practices that support optimal patient outcomes. ScionHealth's commitment to quality is reflected in external recognition and improving patient outcomes. For example, a large majority of ScionHealth's specialty hospitals in California have earned Disease-Specific Care Certifications in Respiratory Failure and/or Sepsis from the Joint Commission. Kindred Hospital Santa Ana has achieved and maintained a Disease Specific Care Certification in Respiratory Failure by the Joint Commission. Treatment plans are aligned with national industry standards and regularly reviewed to ensure that the most current

guidelines are applied. This ensures that every patient receives consistent, high-quality treatment across all populations. Our multidisciplinary teams apply protocols consistently. Given the inherent risks of the population we serve, high-reliability principles are applied to prevent deterioration and drive escalation of care needs. For example, we reduce the likelihood of disease progression through the mechanisms of rapid-response alerts, which are activated at the earliest signs of patient decline, and immediate, multidisciplinary assessments aimed at stabilizing the patient. We debrief on performance, evaluate ourselves regularly, and continually translate lessons learned back into practice. All told, these practices ensure that all patients – regardless of language, socioeconomic status, or background – receive the same effective, high-standard of care

Care coordination

Kindred Hospital-Santa Ana is committed to effective care coordination to ensure a comprehensive, patient-centered process to enhance patient and family engagement and satisfaction and improve health outcomes. Care coordination and discharge planning begin as soon as the patient is admitted, with staff assessing anticipated discharge needs, social determinants of health, and patient goals. We recognize that a safe, effective transition from long-term acute care hospital to home or another care setting requires time, coordination, and thoughtful planning by the multidisciplinary care team, along with collaboration with care and community partners. Our case managers and social workers collaborate with patients and families to review discharge options, ensuring that appropriate insurance coverage and authorizations are in place. They coordinate to ensure access to durable medical equipment and appropriate services — health services, rehabilitation, outpatient appointments, and support services through community resources, etc. — is available and any health-related social needs are addressed. Interdisciplinary meetings focus on — completing the care — to ensure patients receive the right care at the right time and in the right place. Care Coordination meetings are held to track progress in maintaining continuity of care and access to services that are needed to achieve treatment goals, eliminate barriers and facilitate the transition to the next level of care. During interdisciplinary team rounds at the bedside, patient-centered care plans are reviewed, and patient needs upon discharge are discussed. In addition, patients and their families receive education about post-discharge care options and considerations. This education promotes a safe, effective discharge plan by empowering patients and families to make informed decisions that best meet their needs. Topics of post-discharge education for patients and families include medication management, chronic illness management, health optimization and the use of home equipment. Last but not least, in the days and weeks after discharge, follow-up phone calls are made to patients to answer their questions and address any barriers they may be experiencing to achieve a safe, successful recovery and optimal state of health.

Access to care

Kindred Hospital-Santa Ana recognizes that we serve a unique population of patients with a high prevalence of chronic illness, requiring both intensive inpatient patient care and ongoing support post-discharge. To enhance access to specialists and timely diagnostics, we contract with providers, telemedicine services or local short-term acute hospitals to provide services as needed. For patients with language barriers, we provide services in multiple languages. Upon discharge, patients receive an individualized plan that includes referrals to needed services, based upon their health-related social needs assessment. In collaboration with community partners, we connect patients to community-based resources, as needed. We also schedule follow-up appointments and referral services to provide timely access to care. Common discharge barriers for our patients include access to transportation, access to affordable medications, and identification of primary care providers and specialists. We support our patients by making arrangements with local resources, then evaluate their effectiveness through a discharge phone call process, providing another safety net for timely access to care. Our coordinated approach seeks to strengthen care access, improve satisfaction, and ensure safe, equitable, timely delivery of health services for all patients, regardless of geography, socioeconomic status, or personal background.

Methodology Guidelines
